

## ASX Announcement

**ASX Code: AMU**

25 February 2009

### EXPLORATION ANNOUNCEMENT

#### FURTHER SUCCESS AT LONGVILLE AS LYLES #1 WELL INTERSECTS 23 FEET OF PAY

The Lyles #1 well located in the Longville project area, Allen Parish, Louisiana has been drilled to a total depth of 9,000 feet. Logs and formation tests of this well have identified a 23 foot thick, full to base, pay column with 30% porosity in the Cockfield H1 sand. Amadeus owns a 28% working interest in this prospect which is targeting reserves of 800,000 BOE (barrels of oil equivalent).

The Lyles #1 is the third Cockfield well to be drilled in the Longville Project. The first two wells, Doornbos #1 and Crosby #2, also intersected commercially productive zones and have been cased and tested. The test rate of the Doornbos #1 well was 600 BOPD on a 12/64 inch choke. The test rate for the Crosby #2 well was 350 BOPD and 2 MMCFPD on a 12/64 inch choke. These two wells are targeting reserves of 400,000 BOE and 600,000 BOE respectively.

All three wells await completion of a gas sales line and it is anticipated that they will be placed on production within the next 60 days. This gas sales line will also allow for the quick tie in of any additional successful wells drilled in the Longville Project.

The Patterson drill rig will be moved from the Lyles #1 location and is scheduled to drill the Tritico Cockfield prospect next. This prospect has reserve potential in the 800,000 BOE range and is targeting two Cockfield zones above 9,000 feet.

**Amadeus Energy Ltd** is an ASX listed energy company that generates value for shareholders by increasing oil and gas production and growing reserves through the acquisition and development of existing long-life on-shore oil and gas fields and through exploration activity. This is achieved by acquiring properties that have significant development and improvement potential and by investing in a combination of low, medium and high-risk exploration activity. Potential reserves of up to 28 million barrels of oil and 252 billion cubic feet of gas (100%) are being targeted through these development and exploration activities.
